This is the first Office Action for the serial number 10/567,718, VISUAL DISPLAY WALL MOUNTING APPARATUS, filed on 2/8/06.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-14 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1, line 3, "visual display" is indefinite because combination/subcombination problem. "Visual display" is not being positively claimed in preamble of claim 1.

Claim 8 recites the limitation "visual display" in line 3. There is insufficient antecedent basis for this limitation in the claim.

Claims 2-7 are rejected as depending on rejected claim 1. Claims 9-14 are rejected as depending on rejected claim 8.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

Art Unit: 3632

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-14 are rejected under 35 U.S.C. 102(b) as being anticipated by US Patent # 2,299,443 to Walmsely.

Walmsely teaches a wall mounting apparatus/display system comprising a first plate (5) attached to a wall and a second plate (10) attached to visual display (mirror or picture frame, column 1, line 2). The visual display is mounted to the wall by hooking the first and second plates together. The first plate includes an angled portion (9), backstop portion (8) and a flat portion (7). The backstop portion extends between the angled portion and the flat portion. The first plate includes an elongated section (9') which contacts a corresponding elongate section (inner surface of element 10 and located between elements 13-14) of the second plate. The first plate is longer than the second plate (see figure 6). The first plate includes two or more end stops (6 and 15).

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure:

US Patent # 6,685,150 to Anderson

US Patent # 2,757,890 to Sutton et al.

US Patent #2,527,216 to Harris

US Patent # 3,337,172 to Jackson

Anderson, Sutton et al., Harris and Jackson teach first and second plates being connected by hooking to each other.
